

MODULE 1

Choosing your devices and protecting them

Welcome to this first module which will cover digital devices and their protection. Indeed, before embarking on a training focused on digital tools, what could be better than exploring together the different types of tools that exist, their pros and cons in order to guide you through your choices. We will then see how to best protect them in order to make them last.

1 How to choose your device

In this chapter you will discover:

- The different types of devices that exist and their pros and cons
- A short guide to help you decide which device best suits your needs

Discover the explanatory sheet 1

2 Physical protections for your devices

In this chapter you will discover:

- Why it is important to use physical protection for your devices
- The different types of protection for each device and their purpose

Discover the explanatory sheet 2

3 Digital protections for your devices

In this chapter you will discover:

- Why it is important to use digital protection for your devices
- The different types of protection for each device and their purpose:
 - Antivirus
 - App Security
 - Locking methods (pin code, passwords, etc.)
 - Updates
 - Localization function

Discover the explanatory sheet 3

4 Best practices for making your devices last

In this chapter you will discover:

- Tips to extend the lifespan of your devices
- What to do if your phone falls into water to save it

Discover the explanatory sheet 4

Choosing the right devices in the context of work

Here are some situations from your daily life where this module could be useful to you:

Protect your personal and professional device

You may have received a digital device (smartphone, tablet, etc.) from your employer. It is your responsibility to ensure its security. Generally, a case will be provided to protect it physically. You will also have a protection code. It is up to you to ensure that this code does not fall into the wrong hands to protect the information contained therein.

Good tips for devices

This module will also give you tips on how to make your devices last, whichever they are. You will also be able to give advice to the supported people so that they can benefit from them. For example, if the phone falls into water, you will know what to do to try to “bring it back to life”!
